

Successful running of the 24th EU PVSEC

On September 24, 2009 the 24th European Photovoltaic Conference (EU PVSEC) closed and Jonas & Redmann is very pleased with their presentation.

From September 21 to 24, 2009, Jonas & Redmann exhibited a comprehensive product and service portfolio, together with its joint venture JRT Photovoltaics, at the EU PVSEC in Hamburg.

In spite of the overall economic climate, the atmosphere at the trade fair was restrained optimistic. Our booth was well-visited and provided us with opportunities for contract negotiations on every trade fair day. These discussions incorporated not only talks about enlarging the existing production facilities, but also negotiations about delivering production facilities for new lines in the manufacture of crystalline silicon solar cells.

Both companies, Jonas & Redmann and JRT Photovoltaics presented successfully their technical solutions for the automation and metallization in the production of solar cells to a very interested trade fair audience.

Jonas & Redmann exhibited its highly precise and modular configured Wafer Inspection System - WIS. The system provides fully automated wafer inspection and classification. With the development and production of the WIS, Jonas & Redmann is widening its already extensive product portfolio and is therefore strengthening its commitment in the automation of the production of silicon wafers and developing further markets.

JRT Photovoltaics exhibited parts of its Print Line, a groundbreaking and flexible production concept for the partial coating of silicon wafers during the screen printing process. The system guarantees a high print quality with minimal breakage rates and shorter set-up and maintenance periods.

We were able to use the most globally important photovoltaic fair not only for the presentation of innovative products, but also to exchange views about the current economic climate.

To mark the start of this event, we had the opportunity to welcome the Berlin Senator for Economy, Technology and Women, Mr. Harald Wolf, at our booth. During the course of his tour of the EU PVSEC and his visits to companies from his own electoral district, Mr. Wolf also paid a visit to Jonas & Redmann Photovoltaics Production Solutions GmbH on the first day of the trade fair and was able to see for himself our innovation and technical advancement in the automation of solar cell production.

We thank you for your interest in our company. For more information and questions, please contact:
